

Amendments to the Claims

Please amend claim 7 as shown below.

Listing of Claims

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Previously presented) A method comprising:

detecting that a telephone set has been connected to a telephone line; and

in response to the detection:

identifying the telephone line to which the telephone set has been connected;

retrieving a speed dial list from the database based on the identifying, wherein the

speed dial list is associated in the database with the telephone line; and

communicating the speed dial list associated with the telephone line to the

telephone set.

2. (Original) The method of claim 1 wherein the detecting comprises receiving a telephone call automatically placed by the telephone set via the telephone line in response to the telephone set being connected to the telephone line.

3. (Previously presented) The method of claim 2, wherein the telephone line to which the telephone set has been connected is identified based on at least one of a calling party number and an automatic number identification associated with the telephone call.

4. (Original) The method of claim 2 wherein the communicating is performed within the telephone call.

5. (Original) The method of claim 2 further comprising:

providing, within the telephone call, an option to download the speed dial list; and

receiving, within the telephone call, a selection of the option.

6. (Original) The method of claim 1 further comprising:
storing the speed dial list in the telephone set.

7. (Currently amended) A method comprising:
receiving a telephone call automatically placed by a telephone set via a telephone line in
response to the telephone set being connected to the telephone line;
providing within the telephone call an option to down load a speed dial list;
receiving, within the telephone call, a selection of [[an]] the option to download [[a]] the
speed dial list;
communicating the speed dial list to the telephone set; and
storing the speed dial list in the telephone set.

8. (Previously presented) A system comprising:

a processor to:

detect that a telephone set has been connected to a telephone line; and
in response to the detection:

identify the telephone line to which the telephone set has been connected;
retrieve a speed dial list from a database based on the identifying, wherein
the speed dial list is associated in the database with the telephone
line; and

communicate the speed dial list associated with the telephone line to the
telephone set.

9. (Original) The system of claim 8 wherein the processor is to detect that the telephone
set has been connected to the telephone line by receiving a telephone call automatically placed
by the telephone set via the telephone line in response to the telephone set being connected to the
telephone line.

10. (Previously presented) The system of claim 9 wherein the processor identifies the telephone line to which the telephone set has been connected based on at least one of a calling party number and an automatic number identification associated with the telephone call.

11. (Original) The system of claim 9 wherein the processor is to communicate the speed dial list within the telephone call.

12. (Original) The system of claim 9 wherein the processor is further to provide, within the telephone call, an option to download the speed dial list, and to receive, within the telephone call, a selection of the option.

13. (Previously presented) A computer-readable medium having computer-readable content to cause a computer to perform acts of:

detecting that a telephone set has been connected to a telephone line; and

in response to the detection:

identifying the telephone line to which the telephone set has been connected;
retrieving a speed dial list from a database based on the identifying, wherein the speed dial list is associated in the database with the telephone line; and
communicating the speed dial list associated with the telephone line to the telephone set.

14. (Original) The computer-readable medium of claim 13 wherein the detecting comprises receiving a telephone call automatically placed by the telephone set via the telephone line in response to the telephone set being connected to the telephone line.

15. (Previously presented) The computer-readable medium of claim 14 wherein the telephone line to which the telephone set has been connected is identified based on at least one of a calling party number and an automatic number identification associated with the telephone call.

Application no. 10/664,049

Amendment dated: June 26, 2006

Reply to office action dated: February 24, 2006

16. (Original) The computer-readable medium of claim 14 wherein the communicating is performed within the telephone call.

17. (Original) The computer-readable medium of claim 14 wherein the computer-readable content further causes the computer to perform acts of:

providing, within the telephone call, an option to download the speed dial list; and receiving, within the telephone call, a selection of the option.

18. (Original) The computer-readable medium of claim 13 wherein the computer-readable content further causes the computer to perform an act of:

storing the speed dial list in the telephone set.
